## SECTION A. Project Title

Hilal-2 RES Wind Power Project, Turkey

## SECTION B. Project description

**Hilalres Elektrik Üretim San. Ve Tic. A.Ş.** (hereafter referred to as “**Hilalres**”) is investing into a new Wind Power project called **Hilal-2 RES Wind Power Project** (hereafter referred to as the “Project” or “**Hilal-2 WPP**”), which involves installation and operation of 9.9/7 MWm/MWe wind power plant. Also, after the temporary acceptance period, the capacity of the project may be increased to 9 MWe. The licence of the project was issued by Energy Market Regulatory Authority (EMRA) in March 28 of 2012.

An **estimated electricity net generation of 23.907 GWh per year** by the efficient utilization of the available wind energy by project activity will replace the grid electricity, which is constituted of different fuel sources, mainly fossil fuels. The electricity produced by project activity will result in a **total emission reduction of 13,418 tonnes of CO<sub>2</sub>e**. Moreover, project activity will contribute further dissemination of wind energy and extension of national power generation. It is expected that the generation of electricity starts as of 23/10/2015 and will have an operational life of 25 years.

The project will help Turkey to stimulate and commercialise the use of grid connected renewable energy technologies and markets. Furthermore, the project will demonstrate the viability of grid connected wind farms which can support improved energy security, improved air quality, alternative sustainable energy futures, improved local livelihoods and sustainable renewable energy industry development. The specific goals of the project are to:

- reduce greenhouse gas emissions in Turkey compared to the business-as-usual scenario;
- help to stimulate the growth of the wind power industry in Turkey;
- create local employment during the construction and the operation phase of the wind farm;
- reduce other pollutants resulting from power generation industry in Turkey, compared to a business-as-usual scenario;
- help to reduce Turkey's increasing energy deficit;
- and differentiate the electricity generation mix and reduce import dependency.

As the project developer, **Hilalres** believes that efficient utilization of all kinds of natural resources with a harmony coupled with responsible environmental considerations is vital for sustainable development of Turkey and the World. This has been a guiding factor for the shareholders towards the concept of designation and installation of a wind power project. Other than the objective of climate change mitigation through significant reduction in greenhouse gas (GHG) emissions, the project has been carried out to provide social and economic contribution to the region in a sustainable way. The benefits that will be gained by the realization of the project compared to the business-as-usual scenario can be summarized under four main

## GOLD STANDARD PASSPORT

indicators:

### **Environmental**

The project activities will replace the grid electricity, which is constituted of different fuel sources causing greenhouse gas emissions. By replacing in the consumption of these fuels, it contributes to conservation of water, soil, flora and faunas and transfers these natural resources and also the additional supply of these primary energy sources to the future generations. In the absence of the project activity, an equivalent amount of electricity would have been generated from the power plants connected to the grid, majority of which are based on fossil fuels. Thus, the project is replacing the greenhouse gas emissions (CO<sub>2</sub>, CH<sub>4</sub>) and other pollutants (SO<sub>x</sub>, NO<sub>x</sub>, particulate matters) occurring from extraction, processing, transportation and burning of fossil-fuels for power generation connected to the national grid.

# GOLD STANDARD PASSPORT

## SECTION C. Proof of project eligibility

### C.1. Scale of the Project

Please tick where applicable:

Project Type	Large	Small
	<input type="checkbox"/>	<input type="checkbox"/>
	<input type="checkbox"/>	<input type="checkbox"/>
	<input type="checkbox"/>	<input type="checkbox"/>
	<b>X</b>	<input type="checkbox"/>
	<input type="checkbox"/>	<input type="checkbox"/>
		<input type="checkbox"/>

### C.2. Host Country

The host country is Republic of Turkey.

### C.3. Project Type

Please tick where applicable:

Project type	Yes	No
Does your project activity classify as a Renewable Energy project?	<b>X</b>	<input type="checkbox"/>
Does your project activity classify as an End-use Energy Efficiency Improvement project?	<input type="checkbox"/>	<input type="checkbox"/>

# GOLD STANDARD PASSPORT

Please justify the eligibility of your project activity:

“Hilal-2 RES Wind Power Project, Turkey” is classified in the Renewable Energy Source category as electricity from non-fossil and non-depletable energy sources, in this case from wind, is fed into the Turkish electricity grid.

Pre Announcement	Yes	No
Was your project previously announced?	<input type="checkbox"/>	<b>X</b>

## C.4. Greenhouse gas

Greenhouse Gas	
Carbon dioxide	<b>X</b>
Methane	<input type="checkbox"/>
Nitrous oxide	<input type="checkbox"/>

## C.5. Project Registration Type

Project Registration Type	
Retroactive	<b>X</b>

Pre-feasibility assessment	Retroactive projects (T.2.5.1)	Preliminary evaluation (eg: Large Hydro or palm oil-related project) (T.2.5.2)	Rejected by UNFCCC (T2.5.3)
	<b>X</b>	<input type="checkbox"/>	<input type="checkbox"/>

**Start Date of Construction: 15/09/2014**

# GOLD STANDARD PASSPORT

## SECTION D. Unique project identification

### D.1. GPS-coordinates of project location

Wind Turbine No.	Longitude (E)	Latitude (N)
1	36 <sup>0</sup> 56' 14.7408''	33 <sup>0</sup> 10' 20.7596''
2	36 <sup>0</sup> 56' 12.0984''	33 <sup>0</sup> 10' 30.2540''
3	36 <sup>0</sup> 56' 11.2704''	33 <sup>0</sup> 10' 40.2779''

*Explain given coordinates*

The project site is located about 40 km away from Karaman. The turbine towers will be placed approximately 250 m apart. The closest settlement to the project site is Cerit and Elmadağ Villages which are located to the south and north of the wind farm, respectively. The distance between the village and the closest wind turbine will be approximately 2 km.

# GOLD STANDARD PASSPORT

## SECTION E. Outcome stakeholder consultation process

### E.1. Assessment of stakeholder comments

Since the project is retroactive, there was no local stakeholder meeting. The stakeholder feedback round meeting was held on 05/05/2015.

Stakeholder comment and Questions	Was comment taken into account (Yes/No)?	Explanation (Why? How?)
Will there be any local employment?	Yes	During the construction and the operation phase, we will definitely give priority for the employment of local people provided that they have necessary technical qualifications for the required position.
As a benefit of this project, can we afford electricity cheaper or for free?	Yes	It is not legally possible because all power plants have to transmit the produced electricity to the national grid. And end users get their electricity from distribution grid provided by other private distribution companies.
Is the project harmful for the agriculture or breeding?	Yes	There will be no harm to the existing agriculture or breeding activities.
Will it be forbidden to come close to the project site?	Yes	It will not be forbidden. For safety, there will be certain distance around the turbines, turbines will be surrounded. But beside that, no prohibition will be applied. Also, during construction, again for safety purposes, it can be dangerous to come close to the project site.
We expect some charity works from the project owners.	Yes	Request will be taken into consideration by project owners.

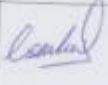

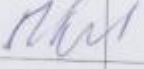

### E.2. Stakeholder Feedback Round

#### E.2.1. Introduction

## GOLD STANDARD PASSPORT

The Stakeholder meeting was held on 5<sup>th</sup> of May 2015. The SFR was started on 14/05/2015. Related documents have been provided on the website <http://bizden.lifenerji.com/genel/hilal-2-ruzgar-enerjisi-santrali-projesi/>. SFR was ended on 14<sup>th</sup> of August 2015.

The meeting was held in Elmadağı village which is the closest settlement to the project site. At the meeting, beside the project manager, participants from the villages and the Mukhtar of Elmadağı village were present. List of participants is provided below.

HILAL-2 RÜZGÂR ENERJİ SANTRALİ PROJESİ YEREL HALK DANIŞMA TOPLANTISI KATILIMCI LİSTESİ				
TARİH/SAAT: 05/05/2015 - 11 <sup>30</sup>				
YER: Elmadağı Köy Konagı				
ADI-SOYADI/MESLEĞİ	CİNSİYET (Erkek/Kadın)	İMZA	ÇALIŞTIĞI KURULUŞ	İLETİŞİM BİLGİLERİ (Telefon&E-Mail)
Esra Kaya	K		Lifenerji	
Durmuş Sakar	E			
Nebi Borkurt	E			
Ahmet Seyhan	E			
Zekerya Yılmaz	E			
Gökhan Büyük	E			
Seda Yücel	K		Re-Gült	

Non-technical project summary was provided to the participants. Project presentation was made by the project manager. Including information about project developers, the technology and operation of the power plant, estimated emission reduction amount of the plant, the importance of revenue from emission reduction and the project characteristics which makes this project different from other power plant projects in Turkey. Before passing to blind sustainable development exercise, question and comments were taken from participants about further clarification of project.

# GOLD STANDARD PASSPORT

During and after description of the project some questions were raised by participants, which were answered by Project Manager and presenter. One of the most important topics raised during meeting was “will there be any local employment?” The concern of local people was answered by project manager. He stated that during the construction and the operation phase, they will definitely give priority for the employment of local people. We are working with a contracting company, they will do the employment planning. After all concerns of the locals are explained, locals expressed their support for renewable energy project of Hilal-2 WPP. At the end of the meeting, continuous input mechanism is discussed and the book had been given to the Muhtar of the Elmadağı village with a protocol. All local stakeholders agreed on this mechanism. E-mail addresses and phone numbers of project owner and consultant were announced. Local stakeholders were encouraged to give feedback about the project. The meeting was closed by a general support from participants.

Furthermore, project documents were made available in Elmadağı village. This section of GS Passport is prepared to provide information regarding how stakeholder feedback round was held.

Outcomes of Stakeholder feedback round will be reported in this document once the SFR has been completed.

## **E.2.2. Providing Project Documents for Stakeholder Access**

### **a. Publication of Project Documents on Website.**

With publication of project documents, it is aimed that all invitees could reach the documents through internet access.

For this reason;

- Project PDD (in English),
- Project Summary (in Turkish and English),
- Project Gold Standard Passport (in English)

were made available on internet page as <http://bizden.lifenerji.com/genel/hilal-2-ruzgar-enerjisi-santrali-projesi/> for more than two months to create opportunity for all stakeholders to reach documents. On the internet page there were different ways to directly comment to Gold Standard for project as;

- Via e-mailing to Esra Koç who is responsible to hold stakeholder consultation meetings
- Via Calling to Esra Koç who is responsible to hold stakeholder consultation meetings
- Via calling Head of Elmadağı village, which is the closest settlement to the project area (this way of commenting gave
- opportunity to stakeholders to comment freely and feel that their comments will be held by an independent party)

### **b. Providing Project Documents as a Hard Copy to the Office of Head of Elmadağı Village for Neighbourhoods.**

## GOLD STANDARD PASSPORT

Project documents were displayed and provided for stakeholder for more than two months as a hard copy in elected Head's Office of Elmadağı village, which was the easiest way for access of anybody.

### c. Invitations

Sending Invitation Letter to the Participants of Local Stakeholder Meeting

Local community and international organizations were invited to the Stakeholder Feedback Round via e-mails and fax and telephone. Gold Standard local expert, supporter of Gold Standard Organizations i.e. WWF, Greenpeace Akdeniz, Helio International, REEEP, MERCYCORPS were invited to comment about the project. Moreover, the participants that could have been invited to first meeting, if there was, were invited to comment on the project. Local people of Elmadağı village, representative of distinct governorate of Karaman were all invited and informed about the project. Please find the list of invitees as below:

**Subject: Stakeholder Feedback Round of Hilal-2 Wind Power Project**

Dear Sir / Madam,

**Hilalres Elektrik Üretim San. Ve Tic. A.Ş.** plans to invest into a wind power project in **Karaman** Province, **Sayharman** countryside and around **Cerit** and **Elmadağ** villages, Turkey to generate electricity and feed it into the Turkish grid. We herewith want to invite you to share your opinion with us during the stakeholder feedback round of Hilal-2 Wind Power Project.

During this round, the accordant documentation is available on the website at <http://bizden.lifenerji.com/genel/hilal-2-ruzgar-enerjisi-santrali-projesi/>

Published documents are; Project Design Document (PDD), Gold Standard Passport, Summary of the project

For the detailed project information you can also contact to **Mr. Gökhan BÜYÜK**.

## E.2.3. Comments Received

An evaluation form was provided to local people with project documents that could be filled in easily to provide comments.

By the end of stakeholder consultation period, there was no comments and requests from invitees as presented by the letter from head of village of Elmadağı Village.

## E.2.4. Discussion on Continuous Input/Grievance Mechanism

[See Annex W]

Discuss the Continuous input / grievance mechanism expression method and details, as discussed with local stakeholders.

## GOLD STANDARD PASSPORT

	Method Chosen (include all known details e.g. location of book, phone, number, identity of mediator)	Justification
Continuous Input / Grievance Expression Process Book	Continuous Input Process Book was provided to Muhtar of Elmadağı village. Contact address of muhtar: Zekeriya YILMAZ	According to the Gold Standard Continuous Input and Grievance Mechanism, a comment book must be made available on the project site or in the most appropriate, publicly accessible location. The book is important to allow for continuous inputs. The region has literacy rates but access to Internet may be low. Therefore, the book is made available to the stakeholders at the mayor of the village.
Telephone access	Esra KOÇ (Lif Enerji) 0312 481 21 42	If stakeholders are in a spread geographical area, telephone contact may be more practical than a physical book. In the Gold Standard Continuous Input and Grievance Mechanism, telephone access is a mandatory method to be made available to the stakeholders. Therefore a telephone number of the consultant company is provided in behalf of the project proponents written in invitation, continuous input mechanism book and project information paper.
Internet/email access	esra.koc@lifenerji.com	According to the Gold Standard Continuous Input and Grievance Mechanism, in regions with widespread Internet access, an email address or website must be provided to the stakeholders.
Nominated Independent	-	In the project region, there is an

## GOLD STANDARD PASSPORT

Mediator (optional)		acceptable level of literacy and also, the stakeholders have access to telephone and internet connections. Therefore, a NIM is not needed.
---------------------	--	--

### E.2.5. Conclusion

During feedback period up to now, there is no comment directed to e-mail or postal addresses provided in invitation letter. As result, there was no comment during stakeholder feedback round which would require amendments in PDD.

## SECTION F. Outcome Sustainability assessment

### F.1. 'Do no harm' Assessment

Safeguarding principles	Description of relevance to my project	Assessment of my project risks breaching it (low, medium, high)	Mitigation measure
<b>Human Rights</b>			
1. The project respects internationally proclaimed human rights including dignity, cultural property and uniqueness of indigenous people. The project is not complicity in Human Rights abuses.	The project respects internationally proclaimed human rights including dignity, cultural property.  Turkey is a party to Universal Declaration of Human Rights: <a href="http://ua.mfa.gov.tr/detay.aspx?2634">http://ua.mfa.gov.tr/detay.aspx?2634</a>	Low	
2. The project does not involve and is not complicit in involuntary resettlement.	No settlements are too close to the project site, and therefore no resettlements are necessary.	Low	
3. The project does not involve and is not complicity in the alteration, damage or removal of any critical cultural heritage.	The project is not involved and is in no conflict with critical cultural heritage.	Low	
<b>Labour Standards</b>			
4. The project respects the employees' freedom of association and their right to collective bargaining and is not complicit in restrictions of these freedoms and rights	The project respects the employees' freedom of association and their rights. Turkey is a party to ILO Convention 87 Freedom of Association and Protection of the Right to Organise Convention, 1948: <a href="http://ua.mfa.gov.tr/detay.aspx?5305">http://ua.mfa.gov.tr/detay.aspx?5305</a>	Low	

## GOLD STANDARD PASSPORT

<p>5. The project does not involve and is not complicit in any form of forced or compulsory labour.</p>	<p>The project does not involve in any form forced labour. Turkey is a party to <u>C29 Forced Labour Convention</u>: <a href="http://www.csqb.gov.tr/csqbPortal/ShowDoc/WLP+Repository/diyih/doc/ilosozlesmetr/29">http://www.csqb.gov.tr/csqbPortal/ShowDoc/WLP+Repository/diyih/doc/ilosozlesmetr/29</a></p>	<p>Low</p>	
<p>6. The project does not employ and is not complicit in any form of child labour.</p>	<p>The project does not involve in any form child labour. Turkey is also a party to convention on Worst Forms of Child Labour since 1999. <a href="http://www.ilo.org/global/about-the-ilo/newsroom/news/WCMS_007917/lang-en/index.htm">http://www.ilo.org/global/about-the-ilo/newsroom/news/WCMS_007917/lang-en/index.htm</a></p>	<p>Low</p>	
<p>7. The project does not involve and is not complicit in any form of discrimination based on gender, race, religion, sexual orientation or any other basis.</p>	<p>The project does not involve in any form discrimination in any kind of form. Turkey is also party to Convention on Discrimination since 1972 to prevent any form of discrimination; <a href="https://treaties.un.org/pages/ViewDetails.aspx?src=TREATY&amp;mtdsg_no=IV-2&amp;chapter=4&amp;lang=en">https://treaties.un.org/pages/ViewDetails.aspx?src=TREATY&amp;mtdsg_no=IV-2&amp;chapter=4&amp;lang=en</a></p>	<p>Low</p>	
<p>8. The project provides workers with a safe and healthy work environment and is not complicit in exposing workers to unsafe or unhealthy work environments</p>	<p>Workers might have occupational accidents during construction and operation phase. According to project developer, during construction and operational phase of the project "Health and Occupational Safety Regulation" will be followed. Regulation could be found under this link too: <a href="http://www.resmigazete.gov.tr/eskiler/2012/06/20120630-1.htm">http://www.resmigazete.gov.tr/eskiler/2012/06/20120630-1.htm</a></p>	<p>Medium</p>	<p>Necessary health and safety measures will be taken during construction and operation phase, relevant staff will be trained to be able to work with high voltages.</p>
<b>Environmental Protection</b>			
<p>9. The project takes a precautionary approach in regard to environmental challenges and is not complicity in practices contrary to the precautionary principle. This principle can be defined<sup>2</sup> as: "When an activity raises threats of harm to human health or the environment, precautionary measures should be taken even if some cause and effect relationships are not fully</p>	<p>Hilal-2 wind power project has minimum impact on environment and takes precautionary approach in regard to environmental regulations. Regulations which entered into force with Environmental Law Numbered 2872 will be Followed.</p>	<p>Low</p>	

<sup>2</sup> The Wingspread Conference on the Precautionary Principle (1998)

## GOLD STANDARD PASSPORT

established scientifically.”			
10. The project does not involve and is not complicity in significant conversion or degradation of critical natural habitats, including those that are (a) legally protected, (b) officially proposed for protection, (c) identified by authoritative sources for their high conservation value or (d) recognised as protected by traditional local communities	The project does not involve and is not complicity in significant conversion or degradation of critical natural habitats and negative impact of the project activity to the environment would be minimum.	Low	
<b>Anti-Corruption</b>			
11. The project does not involve and is not complicit in corruption	The project does not involve any kind of corruption. Turkey is a party to United Nation Convention against Corruption since 2006; <a href="http://ua.mfa.gov.tr/detay.aspx?15042">http://ua.mfa.gov.tr/detay.aspx?15042</a>	Low	

### F.2. Sustainable Development matrix

Indicator	Mitigation measure	Relevance to achieving MDG	Chosen parameter and explanation	Final score
Gold Standard indicators of sustainable development.	If relevant copy mitigation measure from "do no harm" – table, or include mitigation measure used to neutralise a score of ‘-’	Check <a href="http://www.undp.or/mdg">www.undp.or/mdg</a> and <a href="http://www.mdgmonitor.org">www.mdgmonitor.org</a>  Describe how your indicator is related to local MDG goals	Defined by project developer	Negative impact: score ‘-’ in case negative impact is not fully mitigated score 0 in case impact is planned to be fully mitigated No change in impact: score 0 Positive impact: score ‘+’
Air quality		<b>MDG- 7: Ensure Environment Sustainability</b>  7.A Integrate the principles of sustainable development into country policies and programmes and reverse the loss of environmental resources	Parameter: Amount of avoided CO, NMVOC  Explanation: Due to avoidance of fossil fuel combustion, these emissions will be reduced in parallel to reduced CO <sub>2</sub> .	+

## GOLD STANDARD PASSPORT

		7. B Reduce biodiversity loss, achieving, by 2010, a significant reduction in the rate of loss		
Water quality and quantity			<p>Parameter: a) Amount of wastewater to be discharged to the environment b) Payment receipts of transferred waste water, which is generated on site.</p> <p>Explanation: a) Thermal power plants produce considerable amount wastewater especially due to cooling. By the project activity, significant amount of wastewater discharge will be avoided. b) Wastewater generated on site will be discharged from the septic tank.</p>	+
Soil condition		MDG- 7: Ensure Environment Sustainability 7. B Reduce biodiversity loss, achieving, by 2010, a significant reduction in the rate of loss	<p>Parameter: Amount of avoided NOx emissions, Explanation: Thermal power plants lead to considerable amount of NOx emission which has negative impact to soil condition. By project activity significant amount of NOx emission will be avoided by partially switching of thermal electricity production.</p>	0
Other pollutants			<p>Parameters: Noise level during operation of the project activity.</p> <p>Explanation: During the operation of the wind farm there will be some noise due to turbines which is under allowed level.</p>	0
Biodiversity			<p>Parameters: Number of bird strikes to the turbines.</p> <p>Explanation: Bird strike is the main possible impact of wind projects on biodiversity</p>	0

## GOLD STANDARD PASSPORT

Quality of employment	Only staff of operation & maintenance contractor who has climbing certificates will have right to access to towers (accessing the turbines).	<p style="text-align: center;"><b>MDG-1: Eradicate extreme poverty &amp; hunger</b></p> <p>1.B. Achieve full and productive employment and decent work for all, including women and young people</p>	<p>Parameter: Health and Safety and other trainings Explanation: Project developer ensures high standard health and safety conditions for the employees and provides Health&amp;Safety Trainings to employees. Some of the staff may get training on different kind of issues like operation and maintenance of power plant. Baseline for parameter: Not applicable Future target for parameter: All employees will be trained on Occupational Health and Safety issue.</p>	+
Livelihood of the poor		<p style="text-align: center;"><b>MDG-1: Eradicate extreme poverty &amp; hunger</b></p> <p>1.A.Halve, between 1990 and 2015, the proportion of people whose income is less than \$1 a day</p>	<p>Parameter: Number of people living under the poverty line Explanation: Income generation by local orders with project activity will have indirect impacts to changing living standards of the local people and number of people living under poverty line. Baseline for parameter: 0 Future target for parameters: Continuation of the current situation.</p>	0
Access to affordable and clean energy services			<p>Parameter: Change in energy use of local people  Explanation: The project will help to reduce high share of imported fossil fuel dependency of Turkey.</p>	0
Human and institutional capacity	The staff will be trained to be able to work with high voltages.		<p>Parameter: Change in number of jobs and positions for women Explanation: Theoretically, project activity would create new jobs to women. However, due to lack of interest of women to these kinds of jobs stemming from norms of society, impact of the project to this indicator is expected to be neutral.</p>	0

## GOLD STANDARD PASSPORT

<p>Quantitative employment and income generation</p>		<p><b>MDG-1: Eradicate extreme poverty &amp; hunger</b></p> <p>1.A.Halve, between 1990 and 2015, the proportion of people whose income is less than \$1 a day</p>	<p>Parameter: Number of local employment</p> <p>Explanation: The project will create new employments on the project area.</p> <p>Baseline for parameter: N/A</p> <p>Future target for parameter: At least 2</p>	<p>+</p>
<p>Balance of payments and investment</p>		<p><b>MDG-8.D Develop a global partnership for development</b></p> <p>Deal comprehensively with the debt problems of developing countries through national and international measures in order to make debt sustainable in the long term.</p>	<p>Parameter: Amount of avoided natural gas to be imported</p> <p>Explanation: Turkey imports nearly all of natural gas consumed. The project will have positive impacts on balance of payments with shifting some of electricity generation from natural gas.</p> <p>Baseline for parameter: Around 94,061 m<sup>3</sup> for each GWh of electricity generated by natural gas fired PPs.</p> <p>Future target for parameter: See Section G</p>	<p>+</p>
<p>Technology transfer and technological self-reliance</p>		<p><b>MDG-8.F</b></p> <p>In cooperation with The private sector, make available the benefits of new technologies, especially information and communications.</p>	<p>Parameter: Total number of employee having wind power plant related trainings.</p> <p>Explanation: With this project, employees will be trained with wind power project related issues.</p> <p>Baseline for parameter: Only operation related trainings for the staff employed in the existing power plants.</p> <p>Future target for parameter: Continuation of baseline situation</p>	<p>0</p>
<p><b>Justification choices, data source and provision of references</b></p>				
<p>Air quality</p>	<p>Electricity generated from the wind farm partially substitute electricity generation from fossil fuel fired power plants</p>			

## GOLD STANDARD PASSPORT

	<p>that represent a large share of the Turkish grid generation mix. Thus, besides greenhouse gases, all other air pollutants (e.g. SO<sub>x</sub>, NO<sub>x</sub>), particle and VOC emissions are avoided by the project activity. For CO and MNVOC emission amount see <a href="http://www.tuik.gov.tr/PreHaberBultenleri.do?id=16174">http://www.tuik.gov.tr/PreHaberBultenleri.do?id=16174</a>. For net electricity generation in 2013, see TEİAŞ: <a href="http://www.teias.gov.tr/T%C3%BCrkiyeElektrik%C4%B0statistikleri/istatistik2013/uretim%20tuketim(23-47)/34(84-13).xls">www.teias.gov.tr/T%C3%BCrkiyeElektrik%C4%B0statistikleri/istatistik2013/uretim%20tuketim(23-47)/34(84-13).xls</a></p> <p>Dust emergence connected to the project activity appears only for a short time during the construction phase and will be caused by digging foundations, land arrangement works and construction of the roads. While construction will start in the fourth quarter of 2014 which can be a rainy period of the project region, there would be minimum dispersion of the dust. Hence, we can conclude that there will be minimum impact of the dust emissions on the project area.</p> <p>Therefore, in the SDM the positive effect of the project on the air quality is scored with (+).The positive impact of wind energy on air quality is described in Sustainability Monitoring Plan (section G) of GS Passport. Net project generation shall serve as evidence of positive impact of the project activity on this indicator and will be monitored annually as indicated in Section G.</p>
Water quality and quantity	<p>In the baseline, thermal power plants discharges significant amount of waste water to the environment after usage for cooling etc. Hence, with the project activity considerable amount of water discharge will be avoided with substituting partially thermal power plants. For Wastewater discharged by thermal PPs in 2012 see: <a href="http://www.tuik.gov.tr/PreHaberBultenleri.do?id=16175">http://www.tuik.gov.tr/PreHaberBultenleri.do?id=16175</a></p> <p>During operation of project activity only small amount of waste water to be discharged environment. Wastewater production is due to daily consumption of workers. Wastewater treatment will be carried out in regard to the relevant legal environmental regulations. Since significant amount of wastewater will be avoided by the project activity, positive score is given to this indicator. Amount of avoided wastewater to be discharged to the environment will be monitored during operation of the project activity as described in the Sustainability Monitoring Plan (section G) of GS Passport.</p>
Soil condition	<p>In the baseline, thermal power plants emits significant amount of NO<sub>x</sub> which have negative impact to the quality of soil. The adverse effect of emissions of NO<sub>x</sub> on soil conditions is acid rains. Acid rains can damage soil conditions badly. With proposed project activity significant amount of NO<sub>x</sub> emission will be avoided due to substituting partially thermal power plant electricity generation. For NO<sub>x</sub> emission amount see TUIK: <a href="http://www.tuik.gov.tr/PreHaberBultenleri.do?id=16174">http://www.tuik.gov.tr/PreHaberBultenleri.do?id=16174</a>For net electricity generation in 2012 see TEİAŞ: <a href="http://www.teias.gov.tr/T%C3%BCrkiyeElektrik%C4%B0statistikleri/istatistik2012/uretim%20tuketim(23-47)/34(84-12).xls">http://www.teias.gov.tr/T%C3%BCrkiyeElektrik%C4%B0statistikleri/istatistik2012/uretim%20tuketim(23-47)/34(84-12).xls</a></p> <p>With proposed project activity significant amount of NO<sub>x</sub> emission will be avoided due to substituting partially thermal power plant electricity generation. However, to be conservative impact of the project on this indicator is scored to be neutral.</p>
Other pollutants	<p>For this indicator, noise is defined as relevant parameter with the project activity. Since impact of noise can be significant only close area of the project, surrounding area of the project activity is selected as impact assessment boundary and for the baseline, continuation of current situation which is noise stemming from wind, movement of leaf and daily life in the close villages.</p> <p>In the context of the wind farms noise of the turbines can be considered under other pollutants. The distance of the project to closest settlement (Cerit and Elmadağ villages) is approximately 2 km and there is no need to conduct noise and dust measurements. Therefore, in the SDM the negligible effect of the project on the other pollutants is scored with (0).</p> <p>Other pollutant produced by the project activity is waste oil, which is occasionally used for maintenance of turbines. Waste oil produced during both construction and operation phases will be handled in accordance to the regulations. Waste oil produced during both construction and operation phases will be handled in accordance to the Waste Oil Control Regulation was published in the Official Gazette No. 26952 dated 30 June 2008.</p>

## GOLD STANDARD PASSPORT

	<p>Therefore, in the SDM the negligible effect of the project on the other pollutants is scored with (0). Since the indicator is scored (0) and noise level in the close settlement is negligible. The parameter is related with noise level during operation will be not be monitored as described in Sustainability Monitoring Plan (section G) of GS Passport.</p>
<p>Biodiversity</p>	<p>For this indicator, the impact of the project activity can be on birds.</p> <p>Position and operation of turbines may have some negative impact on biodiversity. One of these impacts may be on birds flying over the project area. The number of endangered species and habitats and plants (trees) affected by this project are relevant with this indicator as it is indicated in Annex I of Toolkit. In order to show that the project does not have negative impact on birds, a bird observation report could be provided during the verification.</p> <p>According to the study of Doğa Derneği (National NGO), which is “Important Bird Areas (IBA) of Turkey - 2004 Update”, the closest IBAs to the project site are TR069, TR076, TR119 and TR137. The Turkish version of information note on these areas is given in Annex-2. These information notes give information about bird species around these lands and estimated amount of each species. The coordinates of the areas are also given. As can be seen in Map 2 below, the distance of the project area to both of the IBAs are around 68.4 km, 90.5km, 195 km and 74.6 km, respectively. That shows that there is no impact of the project to these areas.</p>  <p><b>Map 2.</b> Bird areas and project area distances.</p> <p>Since the impact of the parameter, i.e. number of endangered species or habitats affected by the project to this indicator scored zero, it will not be monitored. Therefore, in the SDM the negligible effect of the project on biodiversity is scored with 0.</p>
<p>Quality of employment</p>	<p>In context of wind power projects, height of the towers and rotating parts (such as blades) has some accident risks. Only trained and certificated personnel shall have access to turbines. For Hilal-2 WPP operation &amp; maintenance contractor has the sole responsibility for operation and maintenance. Hence, only trained and certificated staff of the contractor has right to access to towers, climb and perform necessary actions on turbines in case of emergency or fault. Therefore, there is no project related safety risk for this project. Project developer will also ensure healthy and safe working conditions for the employers with internal procedures and equipments. Since project employer will not face to project specific risks (ie. climbing to tower) in the consolidated SDM the Quality of Employment indicator is scored with (+).</p>

## GOLD STANDARD PASSPORT

	<p>Request of local stakeholders about employment has been taken into account and workers have been employed from local people.</p> <p>Since this indicator is scored with positive, chosen parameter which is Health &amp; Safety conditions of employers and number of local employees will be monitored but parameter of defined mitigation measure which is 'accessing the turbines' will be monitored as described in the Sustainability Monitoring Plan (section G) of the GS Passport.</p>
<p>Livelihood of the poor</p>	<p>Generating electricity from resources that was not used before, generates an additional income to the local community, influencing the poverty alleviation, particularly in the rural areas, and accelerates the regional economic development. The stakeholders also confirmed that the project will have positive impacts on the livelihood of the poor by scoring (+) to this indicator. Also project developer is recruiting personnel for security or construction of the project from close villages, subcontractors are also from the same region. However, since monitoring of direct positive impacts of this parameter on livelihood of the poor is difficult, this parameter is scored (0) in the SDM to be conservative. Since this indicator is scored zero and no mitigation measure is required chosen parameter, i.e. total local order placement, will not be monitored.</p>
<p>Access to affordable and clean energy services</p>	<p>As a local energy source, wind power helps to mitigate Turkey's high import dependency and thus improves the access to energy services, especially in the scenarios of import stops or energy price hikes. The International Energy Agency criticises dependency on oil and gas imports and demands for expansion of renewable energy in Turkey (cf. IEA: Energy Policies, Turkey 2005 review, 2005, pages 85, 100 and 129). However, as the improved access to energy services does not affect the local public (as the electricity is delivered to the grid) and cannot be assigned to specific consumers and therefore not be monitored, a conservative score of zero is applied to this indicator.</p> <p>Since this indicator is scored with zero and there is no mitigation measure for this indicator, chosen parameter, i.e. change in energy use of local people, will not be monitored</p>
<p>Human and institutional capacity</p>	<p>Even though project will create significant amount job opportunities, please refer to 'Quantitative employment and income generation' indicator, due to lack of interest of women to these kind of jobs stemming from norms of society, impact of the project to this indicator is expected to be neutral.</p> <p>Project activity will not have any impact to lands and villagers will continue their pre-project activities after project implementation. Since impact of the project activity to this indicator is scored zero, selected parameter will not be monitored.</p>
<p>Quantitative employment and income generation</p>	<p>Within the installation of the project, there will be created employment opportunities for workers (civil services and turbine installations). New working places during the plant installation will be created. During the operation of the wind farm likely 8 persons will be employed. However, since it couldn't be clearly substantiated that wind power plants lead to higher employment comparing with conventional power plants such, this indicator is scored with zero (+) in the SDM.</p> <p>The positions at the wind farm require skilled workers, which will be achieved by adequate trainings. In addition to the skilled employees, there will be employed some security staff in both stages. Because of the introduced new technology, the regional tourist interest in the region will increase, which is expected to influence the regional development and with it the employment situation.</p> <p>Trainings of employees will be monitored with documentation as described in Sustainability Monitoring Plan (section G) of GS Passport.</p>
<p>Balance of payments and investment</p>	<p>The project and its role in strengthening the sustainable sector of electricity generation in Turkey tend to contribute to mitigation of import dependency. Electricity generation from wind sources is completely independent from any imports and thus does not have any negative effects on the balance of payments.</p> <p>The project generation will shift correspondent amount of natural gas fired electricity generation. With this, payments for natural gas imported will decrease. Hence the project will have positive impact on this indicator and it</p>

## GOLD STANDARD PASSPORT

	is scored with (+) in the SDM. The positive effect of the project to this indicator is described in Sustainability Monitoring Plan (section G) of the GS Passport. Share of natural gas fired electricity in Turkish electricity mix will be reported to show continuous positive impact of the project as described in section G.
Technology transfer and technological self-reliance	As the project developer is a Turkish company using the returns from the GS VER project to enable the realization of the wind farm, the Turkish capabilities, competencies and self-reliance regarding the introduction of innovative technologies are strengthened. The fact that the project activity is not common practice in Turkey is comprehensively derived in section B.4 part of the PDD). The project developer considers the investment into and the operation of a new technology in Turkey as a contribution to technological self reliance due to the gathered experience with the proposed project. And some of the employees will be trained for wind power plant related issues. However, since it is difficult to substantiate and monitor that these trainings will lead an important know-how and technology transfer, this indicator is scored with (0) in the SDM, to be conservative. Since this indicator is scored zero and no mitigation measure is required chosen parameter, i.e. total number of employee having operation and maintenance certificates will not be monitored

### SECTION G. Sustainability Monitoring Plan

No	1	
Indicator	Air Quality	
Mitigation measure	No mitigation measure.	
Chosen parameter	Amount of CO and NMVOC emissions	
Current situation of parameter	According to latest official data CO and NMVOC emissions due to electricity generation in 2012 are: 0.160 tons/GWh and 0.034 tons/ GWh respectively <sup>3</sup> .	
Estimation of baseline situation of parameter	No quantitative information is available for projection of described emission rates. Continuation of current emission rates is estimated in case of baseline situation.	
Future target for parameter	Reductions of proportionate amount in described emissions during operational life of the project activity. When electricity generation amount (23.907 GWh/y) is considered for the project activity then expected annual emission avoidances with project implementation becomes 3.8 and 0.8 tons respectively for each parameter.	
Way of monitoring	How	Amount of annual net electricity generation, which is calculated by monthly settlement notifications of PMUM based on monthly meter readings, will be used to calculate estimated CO and NMVOC emission reductions by project activity
	When	Annually
	By who	Assigned technician by Plant Manager or assigned carbon consultant

No	2	
Indicator	Water Quality and Quantity	
Mitigation measure	Wastewater produced by workers during construction and operation is	

<sup>3</sup> The unit emissions are calculated as dividing emission amount for each parameter with net electricity amount. (For CO and NMVOC emission amounts see TUIK (table 7 and 8 at the bottom of page): [www.tuik.gov.tr/PreHaberBultenleri.do?id=16174](http://www.tuik.gov.tr/PreHaberBultenleri.do?id=16174)  
For net electricity generation in 2013 see TEİAŞ [www.teias.gov.tr/T%C3%BCrkiyeElektrik%C4%B0statistikleri/istatistik2013/uretim%20tuketim\(23-47\)/34\(84-13\).xls](http://www.teias.gov.tr/T%C3%BCrkiyeElektrik%C4%B0statistikleri/istatistik2013/uretim%20tuketim(23-47)/34(84-13).xls)  
Calculation is further substantiated in Monitoring Plan of CM Calculation Worksheet, which is available to DOE.

## GOLD STANDARD PASSPORT

		collected in an impermeable septic tank, which was constructed on the site. Later they will be periodically disposed of.
Chosen parameter		Amount of wastewater to be discharged to the environment
Current situation of parameter		In 2012; 26,300 m <sup>3</sup> wastewater is discharged the environment due to each GWh electricity produced <sup>4</sup> .
Estimation of baseline situation of parameter		Continuation of current situation
Future target for parameter		Avoidance of around 629.1 thousand m <sup>3</sup> wastewater discharge to the environment per year.
Way of monitoring	How	Amount of annual net electricity generation, which is calculated by monthly settlement notifications of PMUM based on monthly meter readings, will be used to calculate estimated amount of avoided wastewater discharge by project activity.  Records of transfer of waste water from power plant by sewage truck, if it was performed, will be used to demonstrate proper waste water management
	When	Annually
	By who	Assigned technician by Plant Manager or assigned carbon consultant

No		3
Indicator		Biodiversity
Mitigation measure		Bird observation report will be prepared by experts
Chosen parameter		b) Number of birds affected by the project
Current situation of parameter		b) Not applicable
Estimation of baseline situation of parameter		b) None
Future target for parameter		b) Minimum impact
Way of monitoring	How	b) Bird observation report will be prepared.
	When	Once during the first verification
	By who	Verification DOE

No		4
Indicator		Quality of employment
Mitigation measure		Necessary health and safety measures will be taken during construction and operation phase, relevant staff will be trained to be able to work with high voltages.
Chosen parameter		Health & Safety trainings
Current situation of parameter		Employees will be trained to increase their occupational skills
Estimation of baseline situation of parameter		Not applicable.

<sup>4</sup> For Wastewater discharged in 2012 by thermal PPs see cell A5 of Table-2 from:

<http://www.tuik.gov.tr/PreHaberBultenleri.do?id=16175> (Below the page to be onepd , Table-2 cell B10)  
Calculation is further substantiated in Monitoring Plan sheet of CM Calculation Worksheet, which is available to DOE.

## GOLD STANDARD PASSPORT

Future target for parameter		Continuation of current situation
Way of monitoring	How	Training attendance list and/or certificates. Safety measures and equipments will be shown to DOE.
	When	Annually (Once at the end of the each monitoring period). After first verification period, only new cases will be reported. Safety measures and equipments will be shown to DOE during each site visit for verification.
	By who	Assigned technician by Plant Manager or assigned carbon consultant.

No	5	
Indicator	Quantitative employment and income generation	
Mitigation measure	None	
Chosen parameter	Number of local employment	
Current situation of parameter	Number of employment from agriculture	
Estimation of baseline situation of parameter	Continuation of current situation	
Future target for parameter	Additional employment from project region with project.	
Way of monitoring	How	For number of local employment: social insurance registries and receipts of employees. After first verification, only changes in employees will be reported.
	When	Number of local employment: Annually
	By who	Assigned technician by Plant Manager or assigned carbon consultant.

No	6	
Indicator	Balance of payment and investments	
Mitigation measure	No mitigation measures are required.	
Chosen parameter	Amount of payment for natural gas to be imported for electricity generation.	
Current situation of parameter	According to TEİAŞ 22,909,746 thousand m <sup>3</sup> natural gas is consumed for electricity generation in 2013 <sup>5</sup> . In 2013 Electricity generation amount from natural gas is 105,116.3 GWh and share of natural gas in the electricity mix is 43.77% <sup>6</sup> . Since Turkey imports 98.6% of consumed natural gas, it is calculated that for each GWh electricity generation 94,061 m <sup>3</sup> natural gas is imported in 2013.	
Estimation of baseline situation of parameter	According to the projections of TEİAŞ (See Table-7 in B.4 part of the PDD), dependency to natural gas for electricity generation will remain high till the end of 2017 with 44.02% share of the electricity mix in this year.	
Future target for parameter	Avoidance of around 2,248,706 m <sup>3</sup> natural gas import each year by generation of project activity, which is worth about 940,110 EUR per year.	

<sup>5</sup> [www.teias.gov.tr/T%C3%BCrkiyeElektrik%C4%B0statistikleri/istatistik2013/yak%C4%B1148-53/49.xls](http://www.teias.gov.tr/T%C3%BCrkiyeElektrik%C4%B0statistikleri/istatistik2013/yak%C4%B1148-53/49.xls)

<sup>6</sup> [http://www.teias.gov.tr/T%C3%BCrkiyeElektrik%C4%B0statistikleri/istatistik2012/uretim%20tuketim\(23-47\)/37\(06-12\).xls](http://www.teias.gov.tr/T%C3%BCrkiyeElektrik%C4%B0statistikleri/istatistik2012/uretim%20tuketim(23-47)/37(06-12).xls)

## GOLD STANDARD PASSPORT

Way of monitoring	How	TEİAŞ statistics for natural gas share in the electricity mix shall help to demonstrate the high import dependency. Amount of annual net electricity generation, which is calculated by monthly settlement notifications of PMUM based on monthly meter readings, will be used to calculate correspondent amount of currency saved by project activity with help of above calculated factor.
	When	Annually
	By who	Assigned technician by Plant Manager or assigned carbon consultant.

**Alanın Tanımı**  
Doğu Akdeniz bölgesi ve orta Anadolu platosu arasında kalan büyük bir dağ silsilesidir. Akdeniz bölgesindeki en geniş yüksek dağ alpin toplulukları içerir. İle bölgenin geçiş noktasında bulunması ve büyük çeşitlilik gösteren topografik ve jeomorfolojik yapısı, Bolkar Dağlarının doğal yapının ve nadir türler açısından Türkiye'nin en benzersiz alanlarından biri olmasını sağlamıştır. Dağların güney yamaçları fakki Akdeniz iklimi ortası tiplerini içerir. Bu bölgedeki derin kanyonlar ırmak ve nehir mikroklimaları sağlar, bu nedenle Türkiye'nin başka bölgelerinde görülmeyen bazı yarı tropikal canlı türlerini barındırır. Kuzey yamaçlarda ise tipik Orta Anadolu karasal iklimi gödenir ve bu bölge dağ bozkırları ve seyrelmiş orman örtüsüne kaplıdır. Dağın orta bölümündeki yüksek dağ çayırları temmuz ayına kadar karlarla kaplıdır ve yer yer buzul gölleri içerir. Bu göllerden birinde (Kara Göl) dünyanın başka hiçbir yerinde yaşamayan ve nesli tükenmekte olan Toros kurbağası (Rana halli) yaşar. ÖKA, yaban hayatı açısından çok zengindir. ÖKA'daki başlıca insan faaliyetleri hayvancılık ve ormancılıktır. Bolkar Dağları, Akdeniz göçer kültürünün yaşamıya devam ettiği nadir alanlardan biridir.

Kara sıvaokçuğu <i>Serinus pusillus</i>	Üreme	Yaygın			A3	
Kırmızı sıvaokçuğu <i>Emberiza caesia</i>	Üreme	Var			A3	

ÖKA, hem yüksek dağ alpin biyomu, hem de Akdeniz biyomu için A3 kriterini sağlayan az soydaki alandan biridir.

**Koruma Alanları**  
Alanın çok küçük bir kısmı I. Derece Doğal Sit Alanı'dır.

**Tehditler**  
Bazı açın otlatma  
Bolkar Dağlarının güney kanyonlarına inşa edilen barajlar, bu benzersiz dağ silsilesinde tahribata neden olmaktadır. Alanın karşı karşıya olduğu diğer tehditler plansız arazi kullanımı, açın otlatma ve yakacak için odun kesimidir.

# GOLD STANDARD PASSPORT

Restorasyon Aşaması		Gerileme -3				
Yazıkımı: 17400 ha Boyun: 27,316 Uzunlu: 23243 Yüksek: 999 m						
İlke: Konya - Körmen Bölge: Güney - Karapınar - Karapınar						
<b>Alanın Tanımı</b>						
<p>ÖKA, Konya Kapalı Havzası'nın güney kısmında, Karadağ kalıntılarının kuzeyinde yer alan çok geniş bir sazlık alanı ve en güney kısmında Süleymanbaba Gölü adı küçük bir tuzlu gölü içermekteydi. Havzada su rejimine yapılan geniş çaplı müdahalelerden sonra 1990ların ortalarına doğru çok büyük ölçüde kurudu ve sadece ÖKA'nın en güney ucundaki bölgede küçük bir sazlık kaldı. ÖKA doğal niteliğini kaybetmeden önce sazlık ve sivil miktarda balıkçılık yapılmaktaydı. ÖKA'nın çevresi tarım alanları ve oraklarla çevrilidir. Hotamışın kuruması Türkiye'de pek çok sazlığınun sayısında ciddi azalmaya neden olmuştur.</p>

Uzunbocak <i>Himantopus himantopus</i>	1985	Üreme	950		Birey	A4, B1
Bataklıklarangısı <i>Gareola pratincola</i>	1991	Üreme	100		Çift	A4, B1, B2
Büyük ağıbit <i>Charadrius leschenaultii</i>		Üreme	10		Çift	B2
Mahmuzlu kızkıuşu <i>Vanellus spinosus</i>	1991	Üreme	40		Çift	A4, B1, B2
<p>Alanda üreyen diğer türler arasında erguvan balıktık (<i>Ardea purpurea</i>), elmabaş patka (<i>Aythya ferina</i>) ve karabaş martı (<i>Larus ridibundus</i>) bulunur. Bu türler 1998 yılına kadar alanda üremeye devam etmişlerdir. ÖKA'da 1986 yılına kadar ak kıvrıklı kızıkuşu (<i>Vanellus leucurus</i>) üremiştir ancak sulak alanın küçülmesi ile bu türün bölgedeki varlığı son bulmuştur.</p>						
<b>Koruma Alanları</b>						
ÖKA'nın kuzeyindeki küçük bir alan Doğal Sit Alanıdır ancak esas korunması gereken güney bölümün herhangi bir koruma statüsü yoktur.						
<b>Tehditler</b>						
Su rejimine müdahale, baraj yapımı						
Barajlar, tahliye ve sulama kanallarıyla alanın su rejimine yapılan müdahaleler sonucu sazlık çok büyük ölçüde kurutulmuş, restorasyon aşamasına gelmiştir. DSİ, Konya Kapalı Havzası'ndaki tarımsal faaliyetlerden geri dönen suyun depolanması için bölgenin bir baraja dönüştürülmesi planlanmaktadır. Bu proje uygulandığı takdirde alanın doğal yapısı kimüyle kaybedilecektir.
